Top rated infectious disease doctors near me

This article appears in the April 2018 Printed Issue as part of the cover story of Top Doctors. Click here to sign up. These doctors are experts in the diagnosis and treatment of infections. Robert Y. Choi, M.D., MPH, HIV/AIDS, general infectious diseases; Providence Medical Group North Everett Clinic, Infectious Disease, 1330 Rockefeller, Suite 520, Everett, 425.261.4905; Providence Regional Medical Center Everett; Johns Hopkins University School of Medicine, 2002 William F. Ehn, M.D., Travel Medicine, AIDS/HIV/Pre-Exposure Prophylaxis (PrEP), Hepatitis B and C; Infectious Disease at Northwest Hospital, 1550 N 115th St., Suite D-101, Seattle, 206.668.1630; Northwest Hospital & Medical Center, Swedish Medical Center-Edmonds; University of Washington School of Medicine, 1982 15 Years Peter Hashisaki, M.D., Overlake Medical Clinic, Infectious Disease, 1200 116th Ave. NE, Suite D, Bellevue, 425.455.8248; Overlake Hospital Medical Center; University of Washington School of Medicine, 1975 Robert M. Rakita, M.D., AIDS/sexually transmitted diseases and infectious diseases, internal medicine, transplant surgery; Infectious Diseases & Tropical Medicine Clinic at University of Washington Medical Center, 1959 NE Pacific St., Seattle, 206.598.4615; University of Washington Medical Center; Case Western Reserve University School of Medicine, 1983 11 years Francis X. Riedo, M.D., travel medicine, HIV, infectious diseases; EvergreenHealth Infectious Disease Care, 12303 NE 130th Lane, Suite 120, Kirkland, 425.899.5100; EvergreenHealth; Johns Hopkins University School of Medicine, 1981 Chia Wang, M.D., Hepatitis B and C, AIDS/HIV, Travel Medicine; Virginia Mason, Infectious Disease, 1100 Ninth Ave., Seattle, 206.341.0846; Virginia Mason Medical Center; Northwestern University, Feinberg School of Medicine, 1990 As we work to get back on track, here are some other areas of WebMD that can be helpful: WASHINGTON, DC – October 2, 2019 – Among the eight exceptional individuals honored by the Infectious Diseases Society of America (IDSA) and the IDSA Foundation at IDWeek 2019 in Washington, DC, is W. Michael Scheld, MD, FIDSA, the recipient of the Alexander Fleming Award for his life's work. IDSA is pleased to recognize the following people for outstanding achievements in the field of infectious diseases: Alexander Fleming Lifetime Achievement Award: W. Michael Scheld, MD, FIDSA Michael Scheld, MD, FIDSA, is an accomplished scientist whose research has greatly expanded our knowledge of serious life-threatening infections including infectious endocarditis, bacterial meningitis and sepsis. In his 40 years as a researcher and educator, Dr. Scheld has advanced our understanding of the pathophysiology of these infections through his extraordinary work with molecular tools and animal models. The recipient of more than Research grants over the course of his career, its impact has expanded from the bank to the bed, influencing recommendations for Dr. Scheld is Bayer-Gerald L. Mandell Professor of Infectious Diseases, Professor of Medicine and Clinical Professor of Neurosurgery at the University of Virginia School of Medicine, where he also served as Director of the Pfizer Initiative in International Health. He has contributed more than 230 of peer review publications to the literature; has published more than 15 books, including central nervous system infections, which are considered the gold standard in this field; and worked in the editorial offices of several magazines. Dr. Scheld, a former president of the IDSA, founded and was a member of the Society's Antimicrobial Availability Task Force, which was set up to combat the pharmaceutical industry's decline in antibiotic development in the face of increasing drug resistance. He was a member of the IDSA Committee on Annual Broadcasting time and panels that drafted guidelines for clinical practice for the management of bacterial meningitis, encephalitis and health-associated ventricular and meningitis. Dr. Scheld's four decades of groundbreaking research, scholarship, and teaching have a huge and lasting impact on the field, on our knowledge of several serious life-threatening infections, and on those with whom he has worked and taught. The company is proud to honor him with the 2019 Alexander Fleming Award for his life's work, said Cynthia Sears, MD, FIDSA, president of IDSA. Other awards presented during IDWeek 2019 include the A. Henderson Award for Outstanding Contributions to Public Health, named after the late epidemiologist who led international efforts to eradicate smallpox. The recipient of this honor is Catherine M. Wilfert, MD, FIDSA. As a tireless advocate of the treatment and prevention of HIV in infants, Dr. Wilfert has made many groundbreaking contributions in this area throughout her long career. These include leading the development of treatments for HIV-infected children and leading efforts to prevent mother-to-child transmission in North Carolina, resulting in a 90 percent reduction in just three years, followed by similar efforts to reduce perinatal HIV transmission in the U.S. and globally, resulting in a 47 percent reduction in new infections worldwide. Dr. Wilfert, Professor of Pediatrics and Microbiology and Head of Pediatrics at the Department of Pediatrics at Duke University School of Medicine, joined the Elizabeth Glaser Pediatric AIDS Foundation as scientific director in 1996. She spent many months of each year in Africa, designing and implementing strategies to disrupt mother-to-child transmission. Their studies have been the basis for policy changes, including at the World Health Organization. Dr. is a world leader in the enormous progress made in reducing perinatal HIV transmission. The Watanakunakorn Clinician Award honors the memory of Dr. Chatrchai Chatrchai and is awarded by the IDSA Foundation to an IDSA member or fellow in recognition of outstanding achievements in the clinical practice of infectious diseases. This year's winner is Virginia D. Banks, MD, MBA, FIDSA. Dr. Banks, an infectious disease physician at Northeast Ohio Infectious Disease Associates in Youngstown, Ohio, is known nationwide for providing leading and innovative infection control solutions in hospitals during her time at the University of Pittsburgh Medical Center's Horizon Health System, including the development of comprehensive care systems, effective public relations, creative education programs, and rigorous clinical trials. Dr. Banks has provided expertise in HIV treatment and prevention, flu, immunization, and hepatitis C, including in her role as an active partner at the National Medical Association, the largest and oldest organization in the country that represents African-American doctors and their patients. She was a member of the nomination committee and the Minority Fellowship Committee of HIVMA. Earlier this year, she was appointed to the newly formed Leadership Development Committee of the IDSA. The Walter E. Stamm Mentor Award, which honors the late former President Walter E. Stamm, MD, is awarded to an IDSA member or colleague who has provided exceptional support for the growth of infectious disease professionals. This year's winner is David L. Thomas, MD, MPH, FIDSA. As a leading provider of viral hepatitis who firmly believes in the importance of promoting the next generation of ID clinicians and researchers, Dr. Thomas has promoted the careers of many trainees with his qualified mentorship. He is Stanhope Bayne Jones Professor of Medicine at Johns Hopkins University School of Medicine, where he is also head of the Division of Infectious Diseases, and is a professor in the Department of Epidemiology at Johns Hopkins University Bloomberg School of Public Health. He has played a major role in caring for many of the current ID leaders in the field of hepatitis C virus (HCV) infection, where his own important contributions have advanced our understanding of epidemiology and the natural history of the disease. Dr. Thomas has supported numerous trainees and junior lecturers at his own institution and elsewhere in achieving their goals through support, advice, honest advice and opportunities. His trainees have received more than USD 100 million in National Institutes of Health-funded awards and have written more than 1,200 peer-reviewed publications in prestigious journals. The Oswald Avery Award for Early Achievement recognizes outstanding achievements in infectious diseases by an IDSA member or colleague who is 45 years or younger. This year's ist Nasia Safdar, MD, MD, PhD, FIDSA, FSHEA. Safdar uses multidisciplinary approaches, including the ergonomics of human factors, mathematical modeling, clinical trials, implementation science, and bank-based microbiome research, to comprehensively address the prevention of C. difficile infections. Their transformative and innovative work has changed the paradigm of effective C. difficile prevention in many health systems and incorporated it into national guidelines. Dr. Safdar is convinced that research needs to be applied in real-world environments to have an impact on patient outcomes, and has created a network of health institutions involved in actively accepting, evaluating and disseminating research results. Their contributions to implementation science have led to a stronger adoption of evidence-based infection prevention practices, narrowing the gap between the generation of evidence and practice. She is the recipient of the Presidential Early Career Award for Scientists and Engineers – the highest award given by the U.S. government to outstanding scientists and engineers who begin their independent careers – and a National Institutes of Health Director's New Innovator Award, which is awarded to highly creative researchers. The Society Glatton Award is presented in recognition of an exemplary contribution to the IDSA, an outstanding discovery in the field of infectious diseases, or a lifetime of excellence in a particular field, whether research, clinical investigation or clinical practice. This year, IDSA is awarding this award to two people: Steven K. Schmitt, MD, FIDSA, and Brian S. Schwartz, MD. Dr. Schmitt, a personal physician in the Infectious Diseases Department at the Cleveland Clinic, was a leading voice for the appropriate recognition of the value of the infectious disease specialist. For more than a decade, Dr. Schmitt has represented the IDSA and its members on several key advisory committees of the American Medical Association, including those that define the reimbursement value for the health care provided by ID clinicians, which makes effective representation critical to the specialty. As chairman of the IDSA Value of ID Specialists Task Force, he led the group's efforts, which led to two groundbreaking publications in Clinical Infectious Diseases: the first, in 2014, reported data showing the value of ID doctor consultation in the care of inpatient Medicare recipients. The second, in 2019, provided similar data for privately insured patients under the age of 65. The two studies form the backbone of efforts to demonstrate the value of ID doctors to the systems in which they practice. Whether he will attend the IDSA's CLINICAL Fellows Meeting, with lawmakers on Hill speaks on behalf of members and patients or at state, regional and national meetings, Dr. Schmitt's passionate advocacy for ID doctors and their value is obvious. As a collaborative innovator, Dr. Schwartz has played a leading role in the ID medical training and to develop it as a concentration area. As more and more doctors seek a career in medical education and the ID specialty works to attract applicants to the field, Dr. Schwartz's efforts to improve medical education have been particularly critical. He was instrumental in the development of a robust medical education path that is now running during IDWeek. He also led efforts to improve preclinical microbiology education, an important opportunity to interest medical students in careers in ID. Dr. Schwartz, a former member of the IDSA Education Committee, was the founding chairman of the Society's Medical Education Working Group and, along with others, led efforts to establish the IDSA Medical Education Community of Practice, the organization's first community. The group will support IDSA members to become better teachers of all learning groups and will support and support the career development of clinic educators with the ultimate goal of recruiting the best and brightest for ID. Dr. Schwartz is associate professor of clinical medicine at the University of California, San Francisco. The Clinical Teacher Award recognizes a career dedicated to excellence by teaching scholarship holders, residents or medical students and motivating them to teach the next generation. This year's prize goes to William L. Salzer, MD, who was unfortunately adopted on Sunday, October 29. During his decades of service, Dr. Salzer became a legendary teacher and mentor to students, some of whom are now faculty members at his own institution, the University of Missouri School of Medicine. With a passion for patient care, medical training, medical training, public relations and mentoring, he contributed significantly to the patient-based learning curriculum as a case and examination author; He has been doing this since the introduction of the curriculum, in which students learn together from real clinical cases, was introduced at the University of Missouri 25 years ago. Dr. Salzer, who arrived early in the office and was one of the last to leave every day, was ready to answer students' questions and respond to urgent pedagogical needs, even if specialist lectures were needed at short notice. Dr. Salzer was listed among the best doctors by US News and World Report in America from 2009 to 2010 and received more than 30 teaching awards during his career. On behalf of the IDSA, I am truly honoured to pay tribute to each of these outstanding personalities and their contributions in the field of infectious diseases. Everyone is an innovator, a mentor and an inspiration. They have a standard for future generations of infectious diseases doctors and scientists, we can all aspire, Dr. Sears said. Detailed awards, recipient biographies and information about other awards that will be awarded to members of the Society this year can be found at www.idsociety.org/about-idsa/society-awards/. The Annual General Meeting of the Company, IDWeek 2019, will take place from 2 to 6 October at the Convention Center in Washington, DC. For more information, see IDWeek.org. The Infectious Diseases Society of America (IDSA) is an organization of physicians, scientists, and other health professionals dedicated to promoting health through excellence in research, education, prevention, and patient care. The company, which has nearly 12,000 members, was founded in 1963 and is based in Arlington, VA. For more information, see www.idsociety.org.
